

What Is Claimed Is:

1. A data input form retrieving system comprising:
character string extracting means for extracting a character string
out of each of plural data input forms containing character strings;
extracting conditions input means for inputting a condition of
extracting a specific data input form out of the plural data input forms; and
data input form extracting means for extracting the specific data
input form by retrieving the character string extracted by the character string
extracting means in accordance with the extracting condition inputted by the
extracting condition input means.
2. The data input form retrieving system according to Claim 1,
wherein all the character strings contained in each of the plural data input
forms are extracted.
3. The data input form retrieving system according to Claim 1,
wherein a specific character string is selected out of the character strings
contained in the plural data input forms.
4. A data input form retrieving system comprising:
keyword adding means for adding a keyword to each of plural data
input forms;
extracting condition input means for inputting a condition of
extracting a specific data input form out of the plural data input forms; and
data input form extracting means for extracting the specific data
input form by retrieving the keyword added by the keyword adding means in
accordance with the extracting condition inputted by the extracting
condition input means.
5. A data input form retrieving method comprising:

extracting a character string out of each of plural data input forms containing character strings;

inputting a condition of extracting a specific data input form out of the plural data input forms; and

extracting the specific data input form by retrieving the extracted character string in accordance with the inputted extracting condition.

6. The data input form retrieving method according to Claim 5, wherein all the character strings contained in each of the plural data input forms are extracted.

7. The data input form retrieving method according to Claim 5, wherein a specific character string is selected out of the character strings contained in the plural data input forms.

8. A data input form retrieving method comprising:

adding a keyword to each of plural data input forms;

inputting a condition of extracting a specific data input form out of the plural data input forms; and

extracting the specific data input form by retrieving the added keyword in accordance with the inputted extracting condition.

9. A computer-readable recording medium recording thereon a program for causing a computer to execute the steps of:

extracting a character out of each of plural data input forms containing character strings;

inputting a condition of extracting a specific data input form out of the plural data input forms; and

extracting the specific data input form by retrieving the extracted character string in accordance with the inputted extracting condition.

10. The computer-readable recording medium according to Claim

9, wherein all the character strings contained in each of the plural data input forms are extracted.

11. The computer-readable recording medium according to Claim 9, wherein a specific character string is selected out of the character strings contained in the plural data input forms.

12. A computer-readable recording medium recording thereon a program for causing a computer to execute the steps of:

 adding a keyword to each of plural data input forms;
 inputting a condition of extracting a specific data input form out of the plural data input forms; and

 extracting the specific data input form by retrieving the added keyword in accordance with the inputted extracting condition.
